

BETACAMP XR INSTRUCTIONS

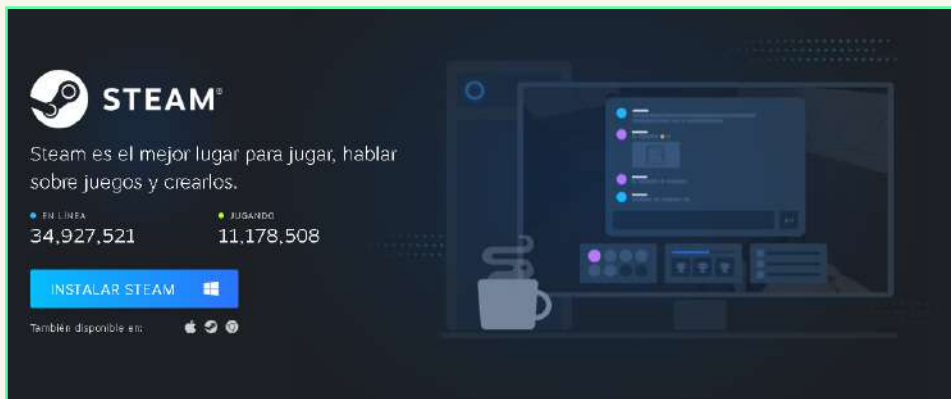

VRCHAT

Live from L.E.V. Laboratorio de Electrónica Visual

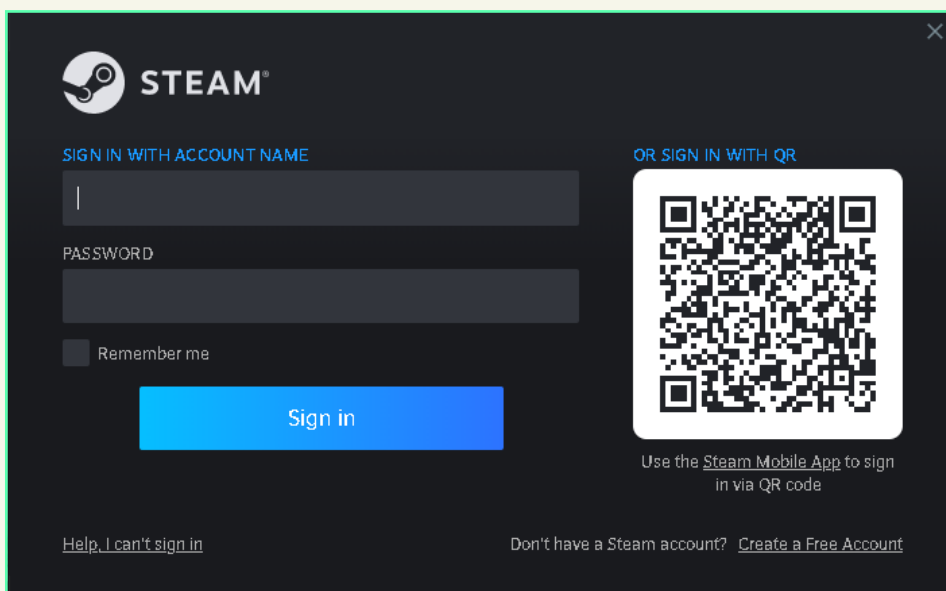

VRChat is a platform that offers an endless collection of social VR experiences by giving the power of creation to its community. VRChat offers a variety of platforms to work with, here we will be describing the easiest one, for Windows, with or without a headset. Please, follow the instructions below for installation and basic usage.

1- VRChat is available on the Steam gaming platform.

Go to <https://store.steampowered.com/> and download Steam to proceed.

2- Once steam is installed, it will require an account to log in. You can then use this account to log into VRChat. Please, remember the username and the password.

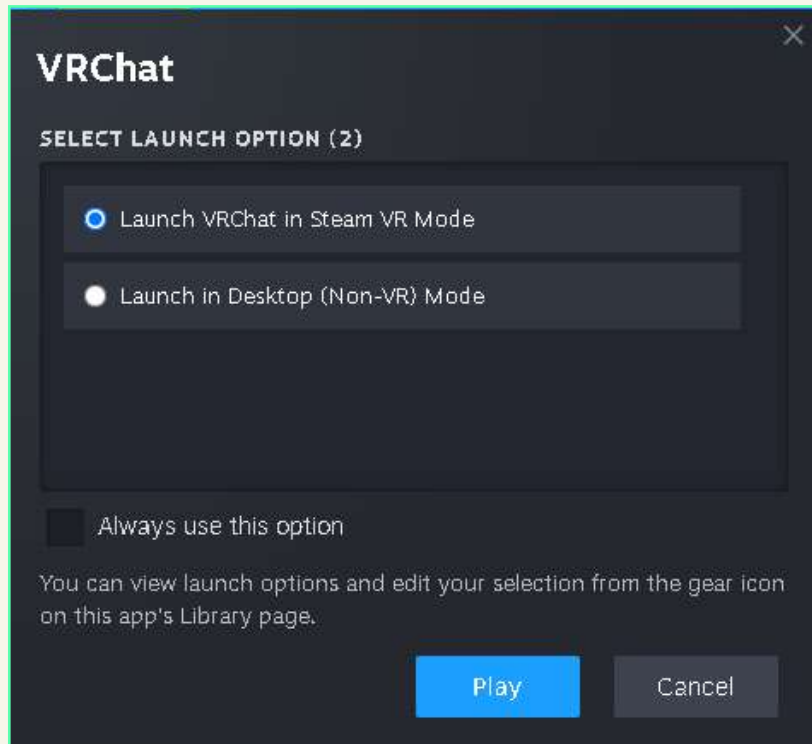

3- Once you have logged into Steam, go to the Store tab and search "VRChat", the free app will appear and you can scroll down to the "install" button. Click on install and proceed to install VRChat on your computer.

4- Once installed, it will appear on the Library tab as an available application. Hit Play to start.

5- If you have hardware and drivers of VR headsets it asks you if you want to start as Desktop application or as Steam VR Mode. Choose Desktop if you want to use it without VR headset.

6-VRChat will ask you to log in, you can use your Steam account for that, or you can create an account inside VRChat for that.
